

Mini Square Circle Production (Acrylic)

The magician first displays a small red rectangular tube and then a yellow one. The audience can clearly see straight through both tubes and is convinced they are completely empty. Yet, moments later, silks, streamers, and many other items begin to appear from inside!

This is a timeless classic of magic, redesigned with a clever principle that differs from the traditional method used in Square Circle effects. Thanks to this innovative system, spectators enjoy an exceptionally clear view of the interiors, making the tubes appear undeniably empty before the production begins.

A highly deceptive production effect that combines simplicity, elegance, and strong visual impact.

- Made from high-quality plexiglass.
- Production items are not included.
- The yellow rectangular tube is 12 cm tall and measures 8 cm on each side.
- The red rectangular tube is 11 cm tall and measures 8.5 cm on each side.
- The included stand raises the entire apparatus by 3 cm.
